

Internship vacancy: New Energy Solutions

DNV GL – Energy

DNV GL delivers world-renowned testing and advisory services to the energy value chain including renewables and energy efficiency.

DNV GL – Energy has great internship/thesis opportunities for you in our “New Energy Technologies” team in Arnhem. This young and inspiring team has a lot to offer for you.

Experience, knowledge, nice colleagues and a great time ;-) are just a small example.

In the team you can experience the innovation and new applications in the field of energy.

Sounds interesting? Just see our short description below!

Assignment

Today’s energy transition is driven by the necessity to decarbonize the electricity sector and the wish to be less dependent on fossil fuels. The NET team is creating business from innovations in the field of energy storage, electric mobility, renewable energy and circular economy.

This assignment can vary from developing models and simulating energy flows in different scenarios to the development of innovative business cases for decentralised power generation technologies . Depending on your background the internship can be very technical or more focussed on the energy market.

For detailed project descriptions, sends us an email!
